core capabilities

Program/Project Management: IPT provides innovative program management solutions for today's challenging environment. We provide the tools, process and competencies required for effective program management for Government clients. Key support areas include; *Strategic Planning & Management, Requirements Analysis, Resource Planning & Control, Risk Management, Schedule Management, Risk Analysis and Financial Planning & Analysis.*

Software Development: IPT's personnel are recognized leaders in software development services for Federal Agencies with unsurpassed experience in .NET software development, Microsoft SharePoint (WSS) implementation, Service Oriented Architecture (SOA) and design. We are fluent in all aspects of software development from requirements gathering to complex architecture design. We develop using multiple methodologies including traditional waterfall development, agile and SCRUM. Key support areas include; *Service Oriented Architecture, AJAX enabled Asp. Net Development, Custom Web component development, Office Integration, Detailed CSS & HTML UI Development, Complex Data Analysis, .NET Development, SQL DB design & implementation, MS platform hardware implementation.*

Business Process Re-Engineering: Tuned by years of hands-on work with Federal Program Managers and CIO's, IPT's approach to process re-engineering is collaborative, sustainable, agile and lean. We identify business improvement opportunities leveraging our extensive reach back capabilities to apply expertise in the relevant area and research in emerging technologies to ensure process recommendations align with industry standards and best practices. Key areas of support include; *Process modeling & root cause analysis, As-Is and To-Be process documentation, Change management, Critical Path Planning and Analysis.*

IT Systems Engineering Management: IPT provides system based engineering services for large scale system acquisitions. We provide the skills, processes and expertise for effective engineering services federal and state government customers. Support areas include; *Configuration Management, Requirements Analysis, Software Architecture & Engineering, Systems Engineering, Systems Architecture and Design.*

about IPT Associates

IPT Associates, LLC. is a dynamic **Service Disabled Veteran Owned Small Business (SDVOSB)** located in Bedford Massachusetts providing **Program/Project management support, Process Re-engineering, Software Development and IT Systems Engineering** to the Department of Defense (DoD) and other federal agencies.

IPT has cultivated a very talented and widely experienced team of skilled former senior military officers, and executive-level government civilians who possess deep domain expertise in the design, procurement, and implementation of information technology, business process engineering, among other diverse specialties. Our consultants have personally navigated the challenges and responsibilities that face our clients; and are quickly accepted as trusted advisors and strategy developers. We support our clients through the design of lean and measurable business processes and the implementation of new capabilities via a disciplined governance methodology.

Navigating today's uncertain economic landscape requires organizations to define and fix broken process to avoid wasting time and resources. IPT has the expertise to leverage **existing** organizational resources and neglected data sources to enhance operational performance.

IPT's goal is to support the Commonwealth's IT Strategy to foster; ***Efficient and easily accessible services for all constituents · Open and transparent engagement with citizens of the Commonwealth. · Accurate and timely data for policy making, service delivery and results evaluation.***

IPT has the expertise to leverage **existing** organizational resources to enhance operational performance via a robust and agile IT infrastructure and process architecture. Think of us as the glue you need to piece together and make sense of existing data and processes. And with seventeen years of federal experience backing it up that sure is some powerful glue!

our president

**Steve Dempsey LtCol. (ret), USAF
President & CEO**

A Lexington native, Steve is a 24 year U.S Air Force Veteran who founded IPT Associates in 1992 with the mission of providing more sophisticated program management expertise to government agencies. Throughout his 40+ year career Steve introduced the "art of possible" using information technology, and invented the System Metric and Reporting Tool. Now a core Air Force system, SMART provides program management transparency and is a conduit for making information available from program offices to senior level managers. Previously Steve served as Chief of Staff at the program level for a complex, high value portfolio of USAF programs.

selected experience briefs

System Metric and Reporting Tool (SMART)

The System Metric and Reporting Tool (SMART) is web based program management tool designed to streamline enterprise data reporting methods and provide a universal standard for assessing program health and performance. Originally designed for the United States Air Force Acquisition community in 2001, SMART is now deployed across several Federal agencies within the Department of Defense with over 8000 users. A successful Federal SMART experience has encouraged us to explore how we can contribute to the achievements of Commonwealth agencies by adapting our tools to *meet MA specific program management needs.*

Domain Requirements Team (DRT)

IPTA leads and enables USAF transformation and Portfolio Management through Enterprise Architecture engineering, process innovation and collaborative tools that integrate Acquisition Domain data and business systems. The effort spans an \$81M portfolio of more than 160 domain systems and tools supporting the DOD and international acquisition community. The DRT delivers expert engineering support and executes the defined cycle of portfolio governance reviews needed to reach sound investment decisions. The DRT serves as the CIO's liaison between portfolio PMs, governance board members and worldwide users.
